Literature for Our
Times offers the widest

range of essays on present and future directions in postcolonial studies ever gathered together in one volume.

Demonstrating the capacity of different approaches and methodologies to 'live together' in a spirit of 'convivial democracy', these essays range widely across regions, genres, and themes to suggest the many different directions in which the field is moving. Beginning with an engagement with global concerns such as world literatures and cosmopolitanism, translation, diaspora and migrancy, established and emerging critics demonstrate the ways in which postcolonial analysis continues to offer valuable ways of analysing the pressing

issues of a globalizing world. The field of Dalit studies is added to fundamental interests in gender, race, and indigeneity, while the neglected site of the post-colonial city, the rising visibility of terrorism, and the continuing importance of trauma and loss are all addressed through an analysis of particular texts. In all of these approaches, the versatility and adaptability of postcolonial theory is seen at its most energetic.

The generation of electricity by wind energy has the potential to reduce environmental impacts caused by the use of fossil fuels. Although the use of wind energy to generate electricity is increasing rapidly in the United States, government guidance to help communities and developers evaluate and plan proposed wind-energy projects is lacking. *Environmental Impacts of Wind-Energy Projects* offers an analysis of the environmental benefits and drawbacks of wind

energy, along with an evaluation guide to aid decision-making about projects. It includes a case study of the mid-Atlantic highlands, a mountainous area that spans parts of West Virginia, Virginia, Maryland, and Pennsylvania. This book will inform policy makers at the federal, state, and local levels.

 Participation in sailing is declining in America, down more than 40% since 1997 and 70% since 1979. In this provocative book, researcher and avid sailor Nicholas Hayes

explains why. The book shows how pressures on free time have increased, and how, in response, many Americans have turned to extremes of spectator or highly structured activities . . . and away from lifelong, family-based, multi-generational recreation. Saving Sailing builds a case for choosing how to spend free time better, using it for quality experiences with families and friends through rewarding pastimes like sailing. The main challenge, the author suggests, is to develop an active system of mentoring, especially between generations. The lessons are broader than sailing, with useful ideas for all parents, for anyone

seeking to strengthen the social fabric of American communities, and for those involved in programming for youth and adult activities.

Shipboard Cuisine from Ancient to Modern
Times Rowman & Littlefield

For more than a decade, the focus of information technology has been on capturing and sharing data from a patient within an all-encompassing record (a.k.a. the electronic health record, EHR), to promote improved longitudinal oversight in the care of the patient. There are both those who agree and those who disagree as to whether this goal has been met, but it is certainly evolving. A key element to improved patient care has been the

automated capture of data from durable medical devices that are the source of (mostly) objective data, from imagery to time-series histories of vital signs and spot-assessments of patients. The capture and use of these data to support clinical workflows have been written about and thoroughly debated. Yet, the use of these data for clinical guidance has been the subject of various papers published in respected medical journals, but without a coherent focus on the general subject of the clinically actionable benefits of objective medical device data for clinical decision-making purposes. Hence, the uniqueness of this book is in providing a single

point-of-capture for the targeted clinical benefits of medical device data--both electronic- health-record-based and real-time--for improved clinical decision-making at the point of care, and for the use of these data to address and assess specific types of clinical surveillance. Clinical Surveillance: The Actionable Benefits of Objective Medical Device Data for Crucial Decision-Making focuses on the use of objective, continuously collected medical device data for the purpose of identifying patient deterioration, with a primary focus on those data normally obtained from both the higher-acuity care settings in intensive care units and the lower-acuity settings of

general care wards. It includes examples of conditions that demonstrate earlier signs of deterioration including systemic inflammatory response syndrome, opioid-induced respiratory depression, shock induced by systemic failure, and more. The book provides education on how to use these data, such as for clinical interventions, in order to identify examples of how to guide care using automated durable medical device data from higher- and lower-acuity care settings. The book also includes real-world examples of applications that are of high value to clinical end-users and health systems.

"This volume of measurement instruments in the English language arts is the second one produced by the Research Instruments Project (TRIP), which was designed to collect and evaluate research instruments in language arts, language and language development, literacy, literature, oral language, reading, teacher knowledge/attitudes, and writing. The 160 measurement instruments are arranged alphabetically by category; within each category, measures are listed alphabetically by author. All instruments are cross-referenced by author. The age range indicated is the specific age grouping

as stated by the authors or the age of the sample to whom the instrument was administered. The description of the instrument provides the purpose of the instrument, the date of construction, and a physical description of the instrument--often including sample items and administration data (directions, time, scoring procedures, and so forth). The lack of reliability and validity data for instruments is indicated when the information was unavailable. In the case of tables of difficulty, indexes, and so on, the data contained are summarized and the complete data are made available with the test or references cited. (HOD)" -- Google

At present and over
the next few years,
large-scale windfarms
are being installed far

Germany in the North

a major contribution to
electricity generation
from renewable energy
sources. One of the
German government's
aims is to ensure the
environmentally sound
and sustainable

development of offshore wind energy. Germany's first offshore test site, alpha ventus, was therefore accompanied from the construction phase to the first years of operation by an intensive environmental research programme, the StUKplus project, financed by the Federal Ministry for the Environment, Nature Conservation and Nuclear Safety and coordinated by the Federal Maritime and Hydrographic Agency. Marine and ecological aspects have been researched there for more than five years to improve the level of knowledge about the ecological impacts of offshore windfarms. This book provides a broad, richly illustrated overview of applied

and new research methods and monitoring techniques. It summarises the key research findings on the impacts on benthic communities, fish, marine mammals and birds, also taking into account underwater sound and sediment measurements. Interpreting the results in the sense of lessons learned, new challenges and perspectives are discussed for future sustainable offshore development in German waters.

L. Francis Herreshoff created some great yacht designs. His designs are marked by clean, sweeping lines and a simplicity of hull and rig that show that they have been drawn

by a true artist. In each design, he strips away every non-essential and leaves the true elements of a masterpiece.

Food at Sea: Shipboard Cuisine from Ancient to Modern Times traces the preservation, preparation, and consumption of food at sea, over a period of several thousand years, and in a variety of cultures. The book traces the development of cooking aboard in ancient and medieval times, through the development of seafaring traditions of storing and preparing food on the world's seas and oceans. Following a largely chronological format,

Simon Spalding shows how the raw materials, cooking and eating equipments, and methods of preparation of seafarers have both reflected the shoreside practices of their cultures, and differed from them. The economies of whole countries have developed around foods that could survive long trips by sea, and new technologies have evolved to expand the available food choices at sea. Changes in ship construction and propulsion have compelled changes in food at sea, and Spalding's book explores these changes in cargo ships, passenger ships, warships, and other types over the centuries in fascinating depth of detail.

Selected passages from songs and poems, quotes from seafarers famous and obscure, and new insights into culinary history all add spice to the tale.

The U.S. economy thrives on the development of new products, new systems, and new processes. Usually, these advances start as a flash of inspiration by highly creative individuals. It is

complex and difficult to go from initial inspiration to a final product, process, or system. So it is not surprising that approximately one out of every four development programs fails. A development program or project in trouble is distinct from a program encountering typical development difficulties. Such a program or project can appear to be in free fall. This book identifies the essential fundamentals for executing a program or project turnaround effectively. These fundamentals include:
Clearly identifying the next critical accomplishment needed for success
Assigning responsibility for each program task to one person

Capitalizing on colocation and face-to-face communication Recruiting problem solvers Wining commitment from team members Using team accomplishments to propel high team morale The guidance provided in this book is applicable to all program or project genres, including manufacturing, nonprofit work, education, medicine, investment management, and municipal management. Software has become a great part of both providing product functionality and assisting with managing product development. A special chapter devoted to software development dispels common misconceptions and provides guidance for

turning around this special type of project or program. This book is a highly valuable source of insight for a wide range of readers, including management professionals, business students, and executive managers. Every member of a product or project development team will find its recommendations to be of high value. *American Small Sailing Craft, Their Design, Development, and Construction* Albatross This notebook contains blank wide ruled line paper which makes it great as a: Gratitude Journal Mindfulness Journal Mood Journal Prayer Journal Poetry or Writing Journal Travel Notebook Daily Planner Dream Journal Yoga, Fitness, Weight Loss Journal Recipe,
