This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value

chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to the development of the automotive industry in ECE in the 2000s: • The role of FDI in the rapid development of the automotive industry after 1990 and particularly in the 2000s. • The upgrading of the automotive industry in East-Central Europe through FDI • The position of ECE in the automotive industry research and development (R&D) • The effects of the 2008-2009 economic crisis in the automotive industry of ECE. • The role of state in the rapid development of the automotive industry in ECE in the 1990s and 2000s. • The effects of FDI on domestic firms in the form of linkages between foreign-owned and domestic firms and spillovers from foreign-owned to domestic firms.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the

proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Global production and purchasing operations create a platform for entry into new markets. However, it takes considerable effort to plan and implement a sustainable globalization strategy; this book will help in that task. The wealth of experience and analysis featured in this book is the result of an extensive survey among leading manufacturing companies as well as countless discussions with executives who have personally wrestled with the issues of "going global." The book treats the whole range of management challenges. In breadth and depth, the insights it offers surpass what a manager or most individual companies could acquire on their own.

Gasoline Engine with Direct Injection

"O'Reilly Media, Inc."

Direct injection spark-ignition engines are becoming increasingly important, and their potential is still to be fully exploited. Increased power and torque coupled with further reductions in fuel consumption and emissions will be the clear trend for future developments. From today's perspective, the key technologies driving this development will be new fuel injection and combustion processes. The book presents the latest developments, illustrates and evaluates engine concepts such as downsizing and

describes the requirements that have to be met by materials and operating fluids. The outlook at the end of the book discusses whether future spark-ignition engines will achieve the same level as diesel engines.

A politically polarized America is coming together over a new kind of car—the plug-in hybrid that will save drivers money, reduce pollution, and increase US security by reducing dependence on imported oil. Plug-in Hybrids points out that, where hydrogen fuel-cell cars won't be ready for decades, the technology for plug-in hybrids exists today. Unlike conventional hybrid cars that can't run without gasoline, plug-in hybrids use gasoline or cheaper, cleaner, domestic electricity—or both. Although plug-in hybrids are not yet for sale, demand for them is widespread, coming from characters across the political spectrum, such as:

- Chelsea Sexton, the automotive insider: working for General Motors, Sexton fought attempts to destroy the all-electric EV1 car and describes how car companies are resisting plug-in hybrids—and why they'll make them anyway.
- Felix Kramer and the tech squad: Kramer started a nonprofit organization using the Internet to tap into a small army of engineers who built the first plug-in Prius hybrids.
- R. James Woolsey, former CIA director

and national security hawk: seeing the end of oil supplies looming, Woolsey is demanding plug-in hybrids to wean us from petroleum. Cautioning that the oil and auto companies know how to undermine the success of plug-in car programs to protect their interests, the book gives readers tools to ensure that plug-in hybrids get to market—and stay here.

Without trust, people and businesses fail. *Trusted Leader* provides a framework for building trust so that you and your organizations can perform at your best. “A lack of trust is your biggest expense,” says Wall Street Journal bestselling author David Horsager.

Without trust, transactions cannot occur. Without trust, influence is destroyed.

Without trust, leaders lose their people.

Trust can be either your most vulnerable weakness or your greatest asset.

Horsager introduces readers to his Eight Pillars of Trust through the journey of a

senior leader who thought success was certain. Follow CEO Ethan Parker as he discovers the power of trust and how to apply it amid the complexities of leadership, change, and culture transformation. The Eight Pillars of Trust (Clarity, Compassion, Character, Competency, Commitment, Connection, Contribution, and Consistency) are based on Horsager's original research and extensive experience working with Fortune 500 companies and top government agencies around the globe. In addition to the business parable, this book is rich in practical advice for implementing each of the Eight Pillars. You will learn strategies to increase alignment, overcome attrition, and get absolutely clear on executing your top priorities. Horsager offers a road map for how to become the most trusted expert in your industry.

Transport, and in particular road transport, represents a significant global threat to long-term sustainable development, and is one of the fastest-growing consumers of final energy and sources of greenhouse gas emissions. In this book, long-term energy economy environment scenarios are used to identify the key technological developments required to address the challenges passenger car transport poses to climate change mitigation and energy security. It also considers

possible targets for policy support and examines some of the elements that contribute to the significant levels of uncertainty particularly social and political conditions. The book then builds on this long-term scenario analysis with a broad review of recent empirical examples of relevant policy implementation to identify near-term options for the passenger transportation sector, which may promote a shift towards a more sustainable transport system over the longer term. Sustainable Automobile Transport will be of particular interest to those in the policy process who are striving to address the automobile-derived challenges associated with climate change a growing rather than declining problem. It will have a worldwide audience as every developed and rapidly growing society struggles to address the dynamic growth in greenhouse gas emissions from automobiles.

The MGB was a great British success story, a product largely conceived, designed and produced by a small team of dedicated people who genuinely cared about their work. Of course, the MGB came from a proud, successful sports car

tradition, and the model it replaced - the revolutionary aerodynamic MGA - had been an unprecedented success - so the new car had big shoes to fill. Launching in 1962 and in production for eighteen years, the MGB became one of the most successful sports cars the world has ever known. This book describes how the MGB arose principally from the ideas of one man, MG's Chief Engineer, Syd Enever, how it was designed and developed, how it survived and thrived,

and how it became the classic car still highly regarded today. There have been many previous books about the MGB, and the related MGC and V8 variants, but MGB - The superlative MG reaches a new level of detail together seasoned with fresh insight. David Knowles has been researching and writing about the MGB for more than thirty years. Prepare to be surprised at some of the stories you will have never read before, and new twists on some you possibly thought you knew well.
