R Visualizations: Derive Meaning from Data focuses on one of the two major topics of data analytics: data visualization, a.k.a., computer graphics. In the book, major R systems for visualization are discussed, organized by topic and not by system. Anyone doing data analysis will be shown how to use R to generate any of the basic visualizations with the R visualization systems. Further, this book introduces the author's lessR system, which always can accomplish a visualization with less coding than the use of other systems, sometimes dramatically so, and also provides accompanying statistical analyses. Key Features Presents thorough coverage of the leading R visualization system, ggplot2. Gives specific guidance on using base R graphics to attain visualizations of the same quality as those provided by ggplot2. Shows how to create a wide range of data visualizations: distributions of categorical and continuous variables, many types of scatterplots including with a third variable, time series, and maps. Inclusion of the various approaches to R graphics organized by topic instead of by system. Presents the recent work on interactive visualization in R. David W. Gerbing received his PhD from Michigan State University in 1979 in quantitative analysis, and currently is a professor of quantitative analysis in the School of Business at Portland State University. He has published extensively in the social and behavioral sciences with a focus on quantitative methods. His lessR package has been in development since 2009.

This is the graphic, first-hand story of the maiden voyage and disastrous sinking of the RMS Titanic, told by the survivors themselves. The story of the sinking of the great liner has been told countless times since that fateful night on April 14, 1912, by historians, novelists, and film producers alike, but no account is as graphic or revealing as those from the people who were actually there. Through survivors' tales and contemporary newspaper reports from both sides of the Atlantic, here are eyewitness accounts full of details that range from poignant to humorous, stage by stage from the liner's glorious launch in Belfast to the somber sea burial services of those who perished on her first and only voyage. In this book, the voices of the survivors share their own stories, as well as the official records, press reports, and investigations into what went wrong that night.

Karl Pearson, founder of modern statistics, came to this field by way of passionate early studies of philosophy and cultural history as well as ether physics and graphical geometry. His faith in science grew out of a deeply moral quest, reflected also in his socialism and his efforts to find a new basis for relations between men and women. This biography recounts Pearson's extraordinary intellectual adventure and sheds new light on the inner life of science. Theodore Porter's intensely personal portrait of Pearson extends from religious crisis and sexual tensions to metaphysical and even mathematical anxieties. Pearson sought to reconcile reason with enthusiasm and to achieve the impersonal perspective of science without sacrificing complex individuality. Even as he longed to experience nature directly and intimately, he identified science with renunciation and positivistic detachment. Porter finds a turning point in Pearson's career, where his humanistic interests gave way to statistical ones, in his Grammar of Science (1892), in which he attempted to establish scientific method as the moral educational basis for a refashioned culture. In this original and engaging book, a leading historian of modern science investigates the interior experience of one

man's scientific life while placing it in a rich tapestry of social, political, and intellectual movements.

"In a nutshell, the Titanic Awards are the Darwin Awards for travel- only nobody dies." -Los Angeles Times Everyone who's ever checked (and lost) their luggage or discovered that their hotel misplaced their reservation knows there are few perfect vacations. The Titanic Awards takes a different approach to these often spectacular travel underachievements: celebrating them. From worst airport layout to most confusing subway system to the most overrated tourist attraction, Lansky looks at these flawed travel destinations with a gimlet eye and a sense of the absurd.

The explosive growth of e-commerce and online environments has made the issue of information search and selection increasingly serious; users are overloaded by options to consider and they may not have the time or knowledge to personally evaluate these options. Recommender systems have proven to be a valuable way for online users to cope with the information overload and have become one of the most powerful and popular tools in electronic commerce. Correspondingly, various techniques for recommendation generation have been proposed. During the last decade, many of them have also been successfully deployed in commercial environments. Recommender Systems Handbook, an edited volume, is a multi-disciplinary effort that involves world-wide experts from diverse fields, such as artificial intelligence, human computer interaction, information technology, data mining, statistics, adaptive user interfaces, decision support systems, marketing, and consumer behavior. Theoreticians and practitioners from these fields continually seek techniques for more efficient, cost-effective and accurate recommender systems. This handbook aims to impose a degree of order on this diversity, by presenting a coherent and unified repository of recommender systems' major concepts, theories, methodologies, trends, challenges and applications. Extensive artificial applications, a variety of real-world applications, and detailed case studies are included. Recommender Systems Handbook illustrates how this technology can support the user in decision-making, planning and purchasing processes. It works for well known corporations such as Amazon, Google, Microsoft and AT&T. This handbook is suitable for researchers and advanced-level students in computer science as a reference.

An inspirational novel of the real-life engineer whose ambitious project to build an electrical grid in Catalonia changed Barcelona forever Xavier Moret illuminates the story of the American engineer Frederick Stark Pearson, an entrepreneur with a global vision, whose innovative business ventures brought electricity to Catalonia. From his arrival in Barcelona in June 1911, Dr. Pearson played a key role in the industrialization of the city, building tram and train networks to benefit from this new form of energy. However, tragedy strikes when Dr. Pearson dies aboard the Lusitania, torpedoed and sunk by a German U-boat. Suddenly, his ambitious project of urban and spatial planning is in jeopardy. Moret compellingly envisions these historic events and the daily life of the American and Spanish pioneers in the local villages and work camps—a world reminiscent of the Wild West. He interweaves this story with his account of his own passionate commitment to chronicling Dr. Pearson's remarkable achievements, and how this process of research and discovery ultimately changed his life.

This is the very first book in which Titanic's passengers and crewmen are permitted to tell the story of the disaster entirely in their own words via the texts of letters, postcards, diary entries and memoirs that were written before, during and immediately after the maiden voyage itself. Many of the pre-sailing documents were written by people who later lost their lives in the sinking and represent the last communications that these people ever had with their friends and loved ones at home. These letters and postcards give an unparalleled description of the events that occurred during the five days that Titanic was at sea, and the communications that were written by survivors after the sinking describe the horror of the disaster itself and the heartbreak they experienced at the loss of their loved ones. This moving book, by Titanic expert George Behe, also contains brief biographies of the passengers ? victims as well as survivors ? who wrote the documents in question.

Titanic scholars contend that the demise of “the unsinkable ship” left more behind than a memory of April 15, 1912, as an important point in history. Through books, films, stories, and songs, the archetypal shipwreck has endured as a metaphor for the perils of mankind’s hubris and the fallibility of technology. In 1985, the discovery of the long-missing wreckage two miles below the surface of the Atlantic revitalized interest in the Titanic and spawned a new generation of books, films, and, for the first time, websites, and computer games. James Cameron’s blockbuster Titanic became the biggest movie of all time and engendered still greater popular interest in the tragic event. This bibliography is a survey of the immense volume of literary, dramatic, and commercial

endeavors that came out of history’s most compelling shipwreck. Organized by genre in accessible categories and short entries, the book includes Titanic-inspired documentaries, narrative films, children’s books, histories, short stories, novels, plays, articles, essays, software, websites, poems, and songs. Each entry includes a brief review, bibliographic information, and the technical details of the specific source. The reviews include subjective analysis designed to reflect the usefulness of the source and to be of benefit to researchers and scholars. Five appendices include lists of the actors appearing in more than one Titanic film, brief film and television appearances of the Titanic, films never or not yet released, books that survived the wreck, and books written by passengers. Even the staunchest of landlubbers knows what rockets at sea mean... or do they? A short space of time after the fatal collision with an iceberg, the Titanic's crew sent rockets aloft to attract the attention of a ship seen just a few miles. But that ship never responded ... and 1500 people died in the frigid waters. This book details the scandal of the Californian, blamed by many for being that very unresponsive stranger. Rockets were seen and ignored...but was the Captain guilty of mass murder? Did more than 1000 people needlessly die? Why was the wireless operator not awakened? Could the Californian have saved anyone? And why is this story, neglecting the ethical controversy surrounding salvage, the single most divisive issue in the Titanic research community?

In the third edition of this bestseller, the author has completely revised, reorganized, and repositioned the original chapters and produced 13 new chapters of creative and useful machine-learning data mining techniques. In sum, the 43 chapters of simple yet insightful quantitative techniques make this book unique in the field of data mining literature. What is new in the Third Edition: The current chapters have been completely rewritten. The core content has been extended with strategies and methods for problems drawn from the top predictive analytics conference and statistical modeling workshops. Adds thirteen new chapters including coverage of data science and its rise, market share estimation, share of wallet modeling without survey data, latent market segmentation, statistical regression modeling that deals with incomplete data, decile analysis assessment in terms of the predictive power of the data, and a user-friendly version of text mining, not requiring an advanced background in natural language processing (NLP). Includes SAS subroutines which can be easily converted to other languages. As in the previous edition, this book offers detailed background, discussion, and illustration of specific methods for solving the most commonly experienced problems in predictive modeling and analysis of big data. The author addresses each methodology and assigns its application to a specific type of problem. To better ground readers, the book provides an in-depth discussion of the basic methodologies of predictive modeling and analysis. While this type of overview has been attempted before, this approach offers a truly nitty-gritty, step-by-step method that both tyros and experts in the field can enjoy playing with.
